My philosophy: Be respectful, have empathy, everything else will follow.

Customer-focused and a passionate web engineer who enjoy defining user experience with understanding customer's pain points. I strongly believe in "*focus on User experience, everything else will follow*" mantra.

I am well-versed in site-speed techniques & performance optimizations, frontend architecture, client-side templating, maintainability and scalability.

Aside from design and developing UI, I love playing chess, ping pong and doing woodworking. I am excited to continue my career with you and looking forward to work in a professional and respectful environment.

WORK EXPERIENCE

Cisco Systems
Feb 2016 – Today
